

Syncing the course repository

- [Syncing the course repository](#)
 - [First time syncing](#)
 - [Syncing after configuring the upstream repository](#)

Remember to sync your forked repository with the course repository before you start working on the assignment. You can do this by running the following commands in the **terminal**.

First time syncing

[Official Guide](#)

Check the current upstream repository:

```
git remote -v
# origin git@github.com:Poissonfish/APSC-5984-ADS.git (fetch)
# origin git@github.com:Poissonfish/APSC-5984-ADS.git (push)
```

You won't see the course repository as the upstream repository. So let's add the course repository as the upstream:

```
git remote add upstream git@github.com:Niche-Squad/APSC-5984-ADS.git
```

Check again:

```
git remote -v
# origin git@github.com:Poissonfish/APSC-5984-ADS.git (fetch)
# origin git@github.com:Poissonfish/APSC-5984-ADS.git (push)
# upstream git@github.com:Niche-Squad/APSC-5984-ADS.git (fetch)
# upstream git@github.com:Niche-Squad/APSC-5984-ADS.git (push)
```

Syncing after configuring the upstream repository

[Official Guide](#)

```
git fetch upstream
git merge upstream/main --no-edit --allow-unrelated-histories
git push
```
